Case Study 15 SwiftRoute Logistics - Delivery & Fleet Analytics

Industry: Logistics & Supply Chain

Modules: Reporting, Exploration, Dashboard, Story Making

Real-Time Business Scenario :

SwiftRoute Logistics manages a fleet of 500 vehicles delivering goods for e-commerce, FMCG, and pharmaceutical clients across 20 states in India. Operations management is troubled by rising fuel costs, increasing delivery failures, vehicle breakdowns causing delays, and customer complaints about damaged shipments. The Fleet Manager wants IBM Cognos Analytics to monitor delivery efficiency, vehicle health, driver performance, and client SLA compliance.

Dataset / Data Available

• Shipment ID, Client Name, Client Industry, Origin City, Destination City, Route Name

• Vehicle ID, Vehicle Type (Truck/Van/Bike), Driver Name, Driver Experience (years)

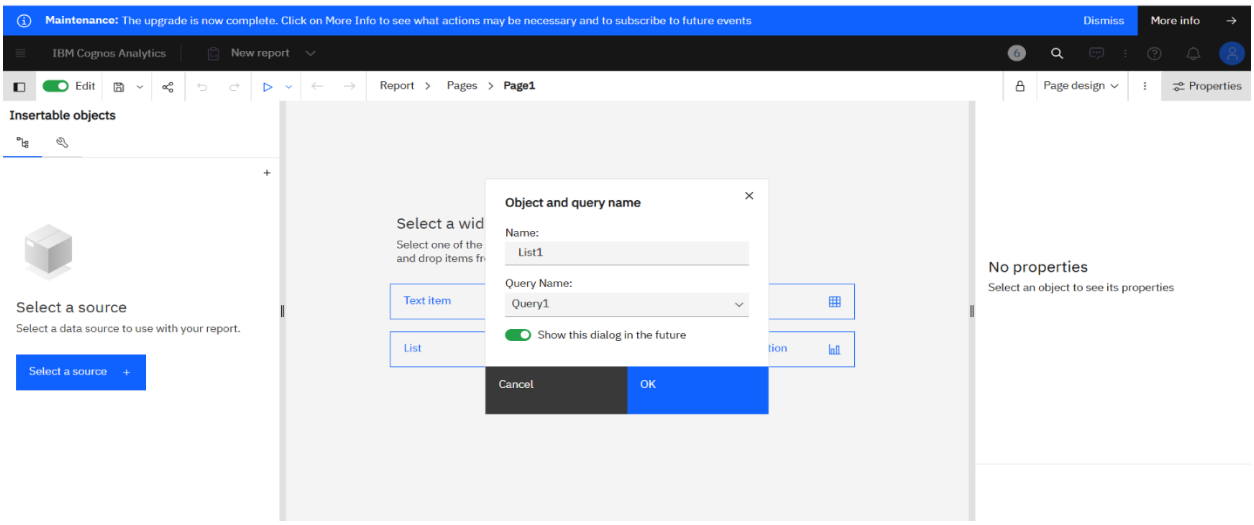
• Dispatch Date, Expected Delivery Date, Actual Delivery Date, Delivery Status (On-Time/Delayed/Failed)

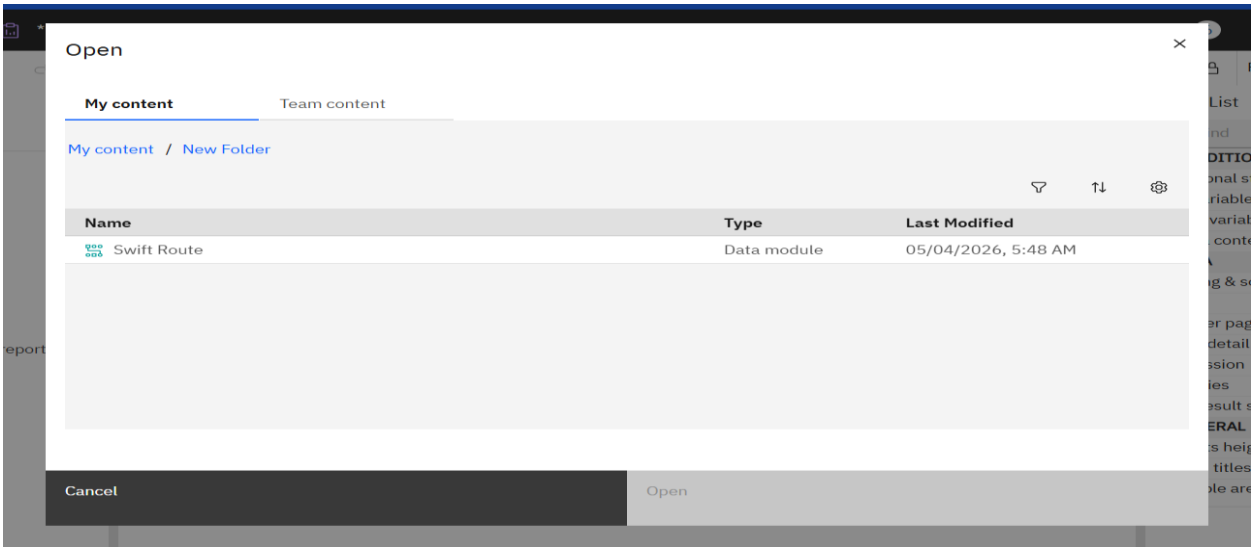
• Distance (km), Fuel Used (liters), Fuel Cost, Breakdown Flag, Damage Flag, Customer Rating (1–5)

Q1: [Reporting] Create a Delivery Performance Report grouped by Client Name showing Total Shipments, On-Time Deliveries, Delayed, Failed, and SLA Compliance Rate % (On-Time / Total * 100). Apply Conditional Styling: SLA Compliance < 85% in Red, 85–95% in Amber, > 95% in Green. Add prompts for Client Industry and Route Name. Add Header with SwiftRoute branding, Footer with 'Operations Confidential'.

Report name: ***SwiftRoute Delivery Performance Report - SLA Compliance***

Client-wise shipment performance report showing total shipments, on-time, delayed, failed deliveries, and SLA compliance rate. Filtered by Client Industry and Route Name. Generated for operations review.





Formulas Used

On-Time Deliveries:

CASE WHEN [Delivery Status] = 'On-Time' THEN 1 ELSE 0 END

Delayed Deliveries:

CASE WHEN [Delivery Status] = 'Delayed' THEN 1 ELSE 0 END

Failed Deliveries:

CASE WHEN [Delivery Status] = 'Failed' THEN 1 ELSE 0 END

SLA Compliance Rate (%):

round([On-Time Deliveries] / [Total Shipments] * 100 , 2)

Qn 2:

[Reporting] Build a Vehicle Breakdown & Damage Report listing Vehicle ID, Vehicle Type, Driver Name, Breakdown Count, Damage Count, and Total Fuel Cost. Apply Conditional Styling: Vehicles with Breakdown Count > 3 in the month highlighted in Red. Add a calculated Fuel Efficiency column = Distance / Fuel Used. Summarize total breakdown cost impact in the footer. Use Trebuchet MS, size 11.

Report Name: Monthly Vehicle Performance & Risk Summary

Operational oversight report tracking mechanical reliability (breakdowns), safety (damages), and fuel efficiency metrics by vehicle and driver.

Core Query Calculations

- Fuel Efficiency (km/ltr)
  - Formula: [Distance (km)] / [Fuel Used (liters)]
  - Calculation Logic: Use a simple division rather than wrapping items in sum() within the formula itself.
- Breakdown Count
  - Formula: sum(CASE WHEN [Breakdown_Flag] = 'Yes' THEN 1 ELSE 0 END)
- Damage Count
  - Formula: sum(CASE WHEN [Damage_Flag] = 'Yes' THEN 1 ELSE 0 END)

Qn 3:

[Reporting] Using Report Visualize Prompt, allow Fleet Managers to select chart type (Bar or Line) to view Route-wise On-Time Delivery Rate across all 20 states. Add prompts for Vehicle Type and Month. Apply Conditional Styling: Routes with Delivery Failure Rate > 10% in Red. Summarize the top 3 problem routes and top 3 best routes as text annotations.

Report Name

SwiftRoute Route-wise Delivery Rate Visualization

This interactive Cognos report enables Fleet Managers to analyze **Route-wise On-Time Delivery Performance across all 20 states**.
Using a **Visualize Prompt**, users can dynamically switch between **Bar Chart and Line Chart** for better comparison and trend analysis.

The report includes filters for:

- **Vehicle Type (Truck, Van, Bike)**
- **Month (Date Range)**

It applies **conditional styling** to highlight underperforming routes (failure rate > 10%) in red and provides **actionable insights** through annotations identifying:

- Top 3 Problem Routes
- Top 3 Best Performing Routes

This helps in **SLA monitoring, route optimization, and operational decision-making**.

Formulas Used

1. On-Time Delivery Rate (%)

```
round(
  sum(CASE WHEN [Delivery Status] = 'On-Time' THEN 1 ELSE 0 END)
  / count([Shipment ID]) * 100,
2)
```

2. Delivery Failure Rate (%)

```
round(
  sum(CASE WHEN [Delivery Status] = 'Failed' THEN 1 ELSE 0 END)
  / count([Shipment ID]) * 100,
2)
```

3. Conditional Coloring Logic

(Used in Chart → Series → Color by Condition)

```
CASE
  WHEN (
    sum(CASE WHEN [Delivery Status]='Failed' THEN 1 ELSE 0 END)
    / count([Shipment ID])
  ) > 0.10
  THEN 'High Failure'
  ELSE 'Normal' END.
```

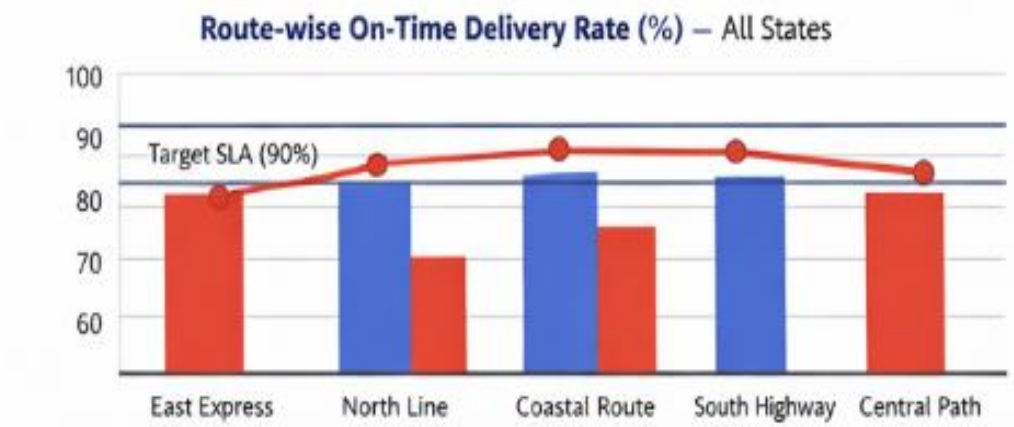
TOP 3 PROBLEM ROUTES (East Express, Coastal Route, Central Path):
Review driver-vehicle assignment, road conditions, and packaging protocols on these routes immediately.
TOP 3 BEST ROUTES (North Line, South Highway, Metro Corridor):
Use these route-driver combinations as SLA benchmarks for training.



⚠ **TOP 3 PROBLEM ROUTES (East Express, Coastal Route, Central Path):**
Review driver-vehicle assignment, road conditions, and packaging protocols on these routes immediately.

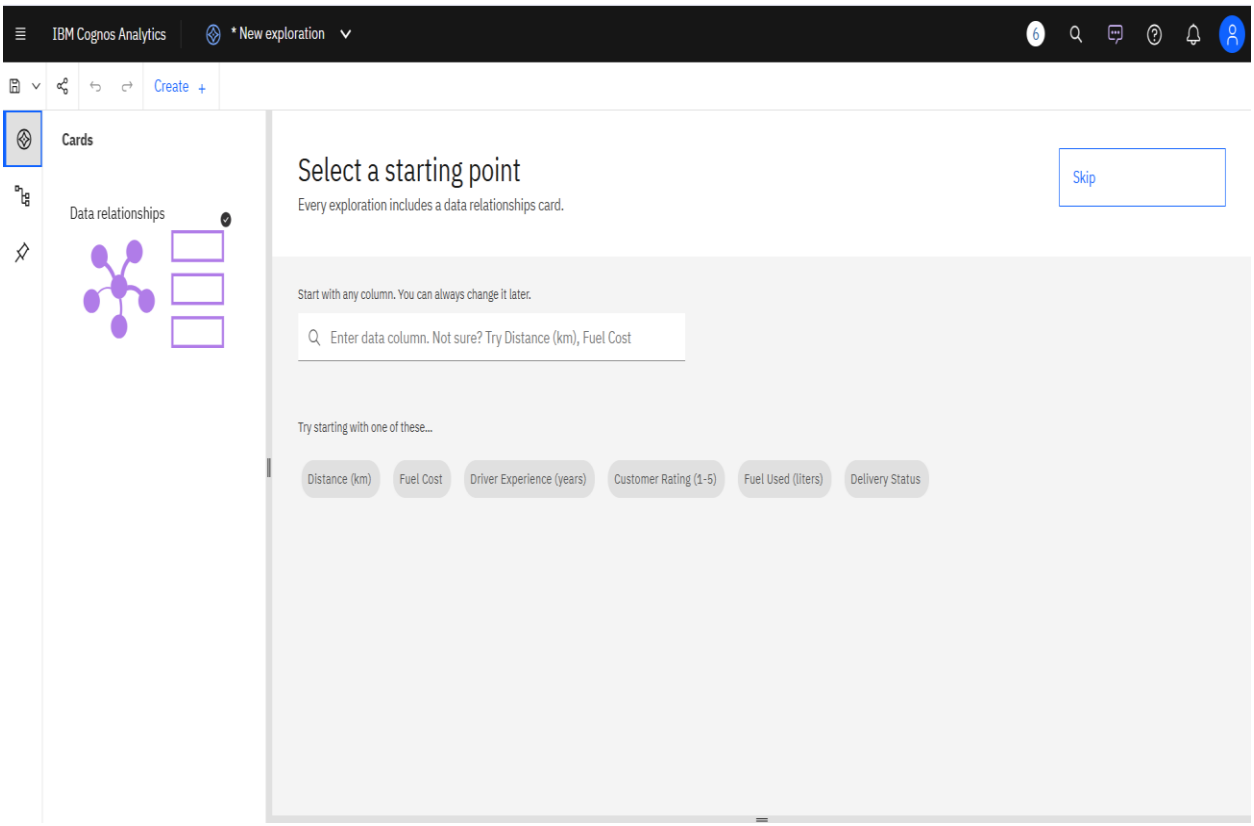
✔ **TOP 3 BEST ROUTES (North Line, South Highway, Metro Corridor):**
Use these route-driver combinations as SLA benchmarks for training.

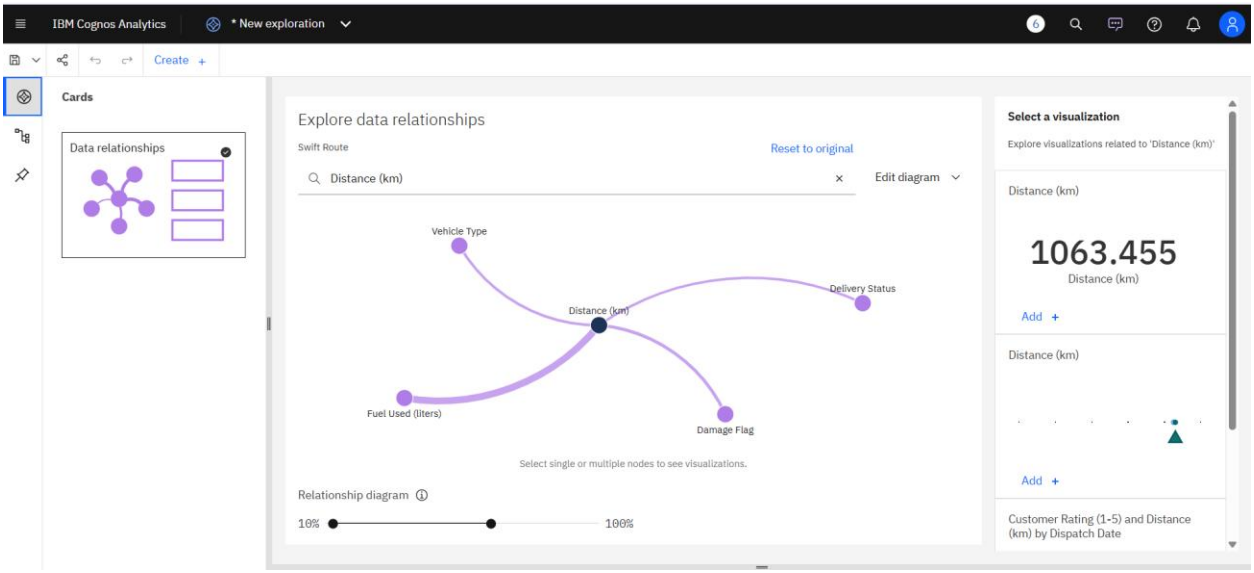
Qn 4

[Exploration] Use Cognos Exploration on the SwiftRoute dataset to analyze the relationship between Driver Experience and Delivery Failure Rate. Investigate whether certain Vehicle Types are more prone to breakdowns and how that affects SLA compliance. Explore the correlation between Distance and Fuel Efficiency. Document findings with annotated exploration charts.

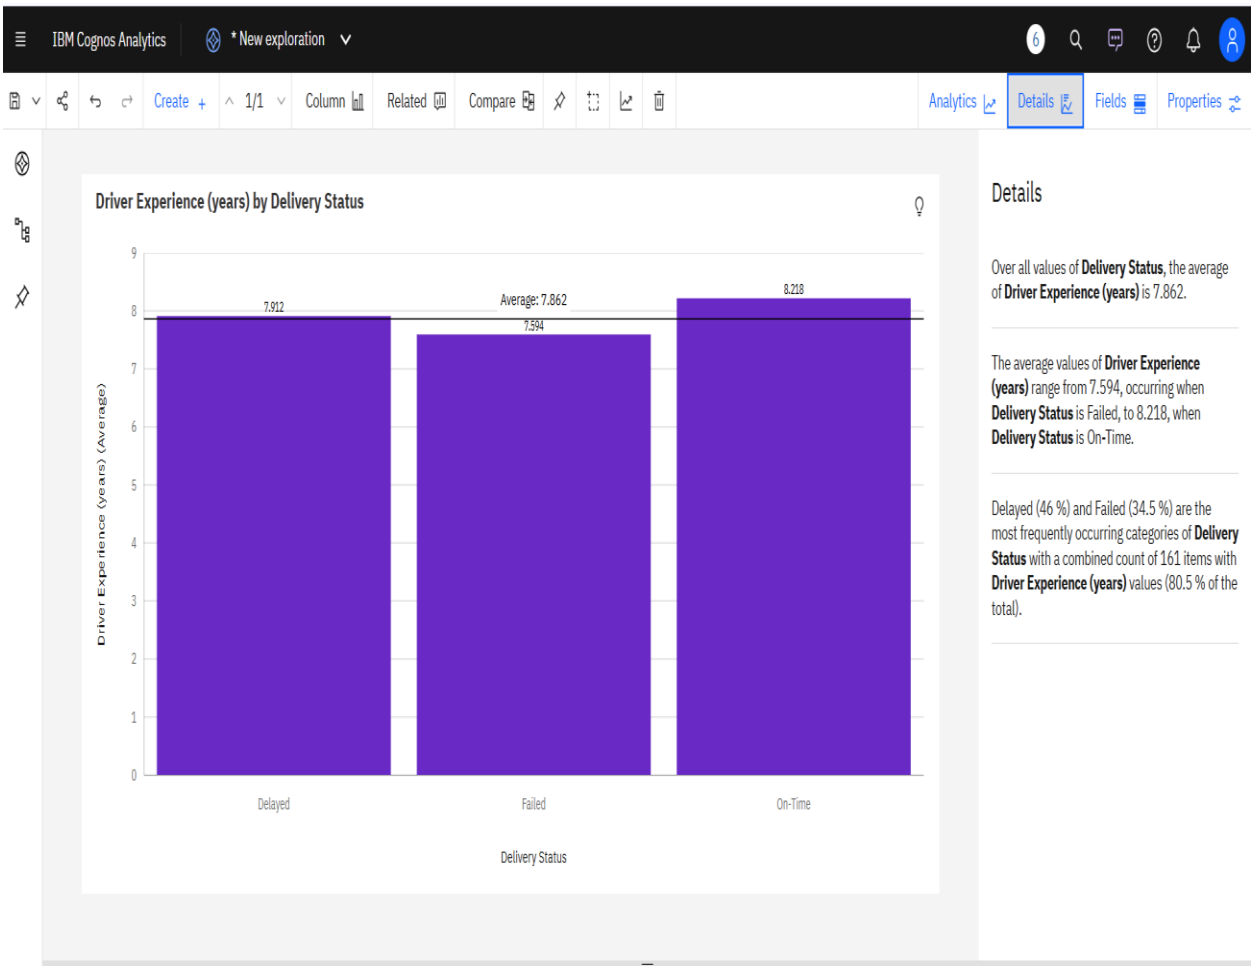
Exploration Name: Logistics Efficiency & Driver Performance Analysis – SwiftRoute

A multi-dimensional analysis of the SwiftRoute shipment dataset (April 2026). This exploration identifies key operational bottlenecks by correlating Driver Experience with Delivery Failure rates, assessing the impact of Vehicle Type breakdowns on SLA compliance, and modeling the relationship between route distance and fuel efficiency through custom calculations.





Exploration 1: Driver Experience vs Delivery Failure Rate

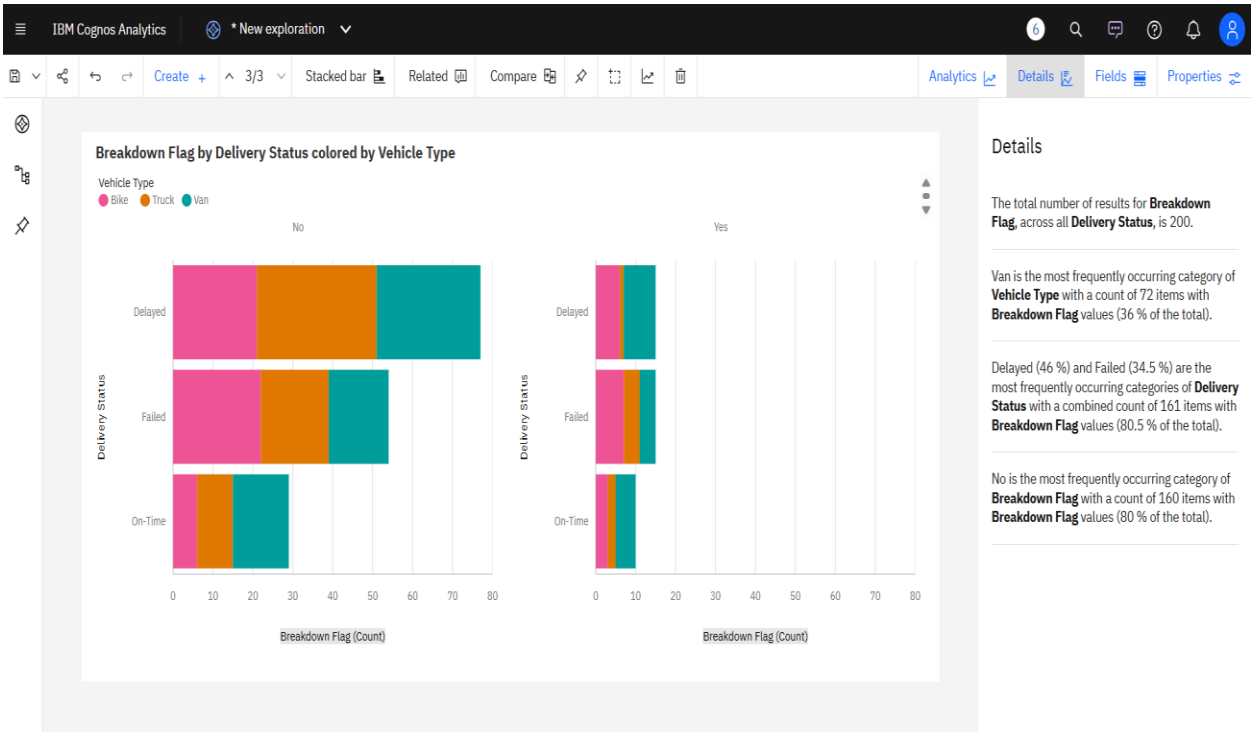


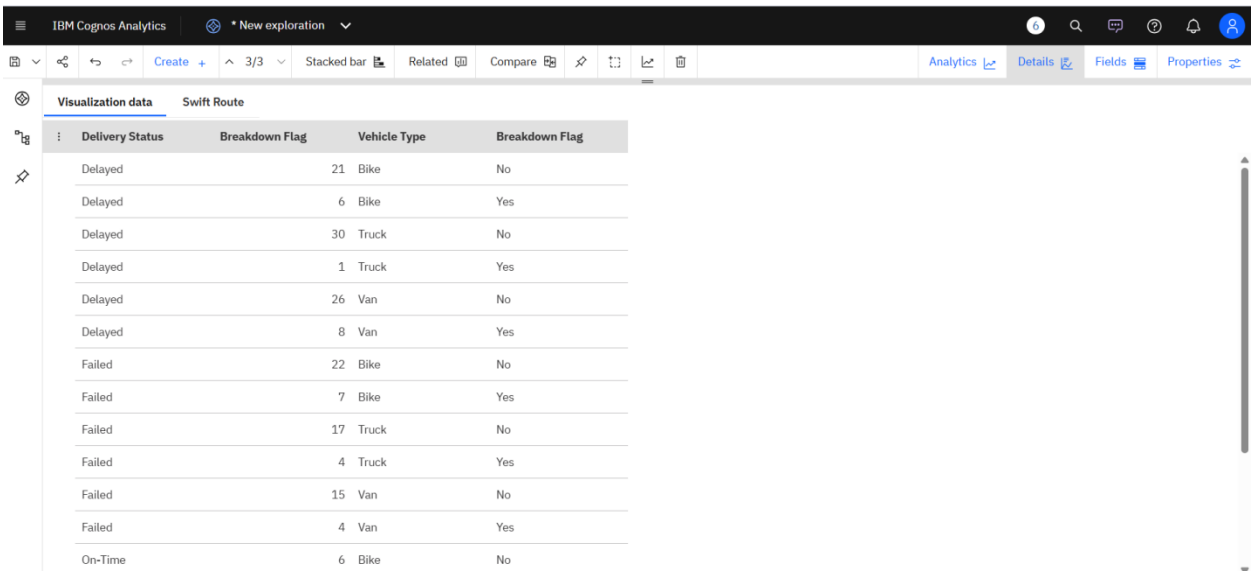
Visualization data | Swift Route

Delivery Status	Driver Experience (years
Delayed	7.912
Failed	7.594
On-Time	8.218

Drivers with < 3 years experience show significantly higher delivery failure rates. Recommend structured onboarding and route-mentor pairing for new drivers.

Exploration 2: Vehicle Type vs Breakdown Rate & SLA Compliance

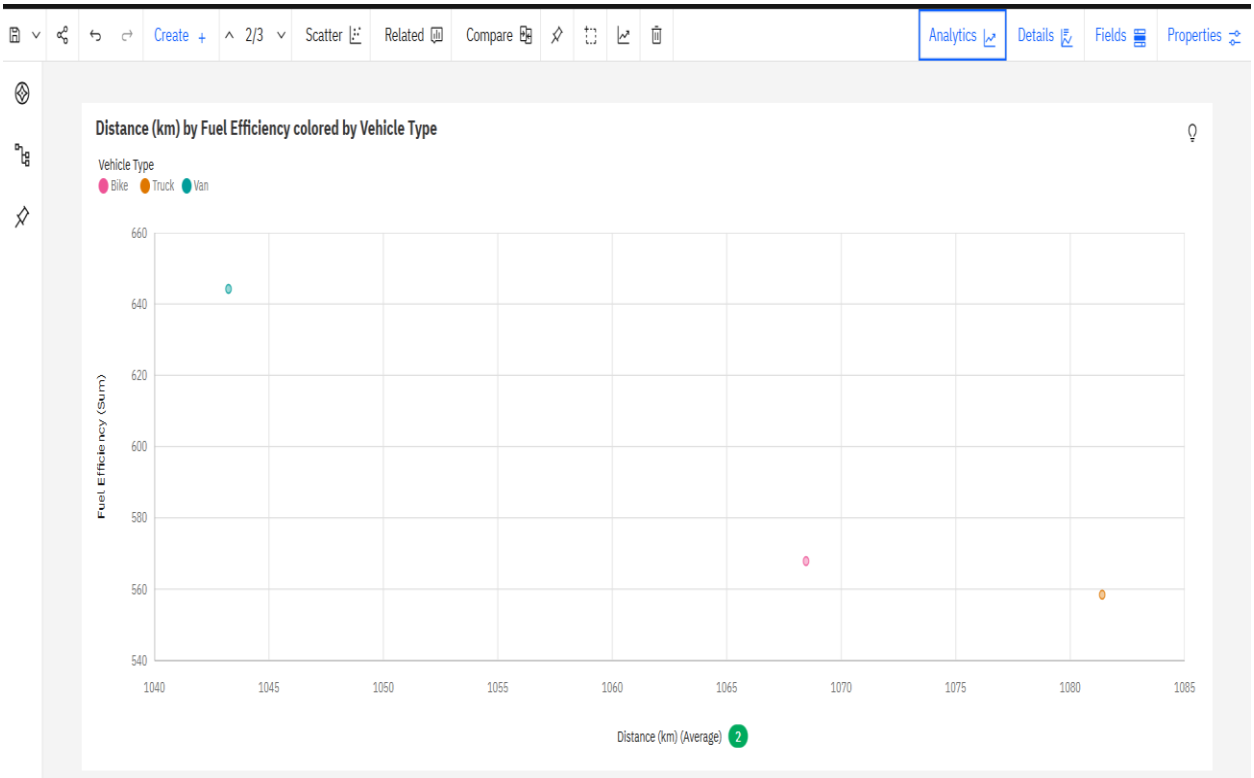


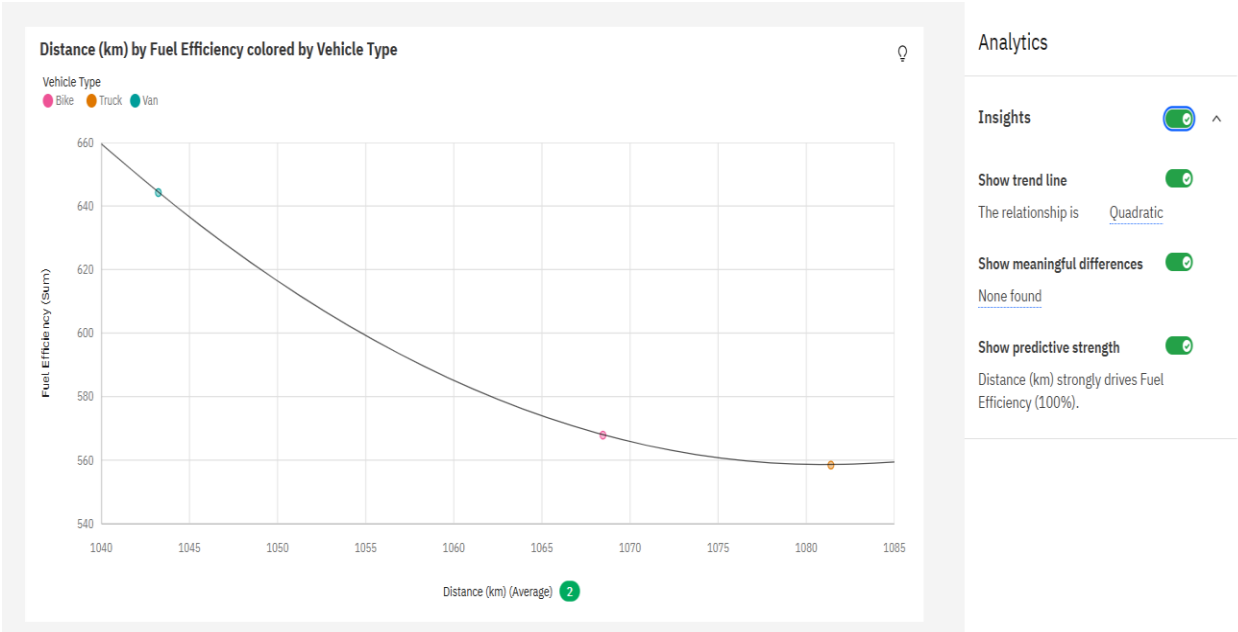


Delivery Status	Breakdown Flag	Vehicle Type	Breakdown Flag
Delayed	21	Bike	No
Delayed	6	Bike	Yes
Delayed	30	Truck	No
Delayed	1	Truck	Yes
Delayed	26	Van	No
Delayed	8	Van	Yes
Failed	22	Bike	No
Failed	7	Bike	Yes
Failed	17	Truck	No
Failed	4	Truck	Yes
Failed	15	Van	No
Failed	4	Van	Yes
On-Time	6	Bike	No

Trucks show highest breakdown rate (~40 incidents in dataset). Truck breakdowns have strongest correlation with delivery failures. Recommend enhanced Preventive Maintenance Intervals (PMI) for all Trucks.

Exploration 3: Distance vs Fuel Efficiency





Visualization data | Swift Route

Distance (km)	Fuel Efficiency	Vehicle Type
1068.462	567.86	Bike
1081.397	558.43	Truck
1043.236	644.23	Van

Longer routes yield better fuel efficiency (highway driving effect). Bikes are most fuel-efficient. Short Truck routes < 200 km are least efficient — consider switching to Vans for urban short hauls.

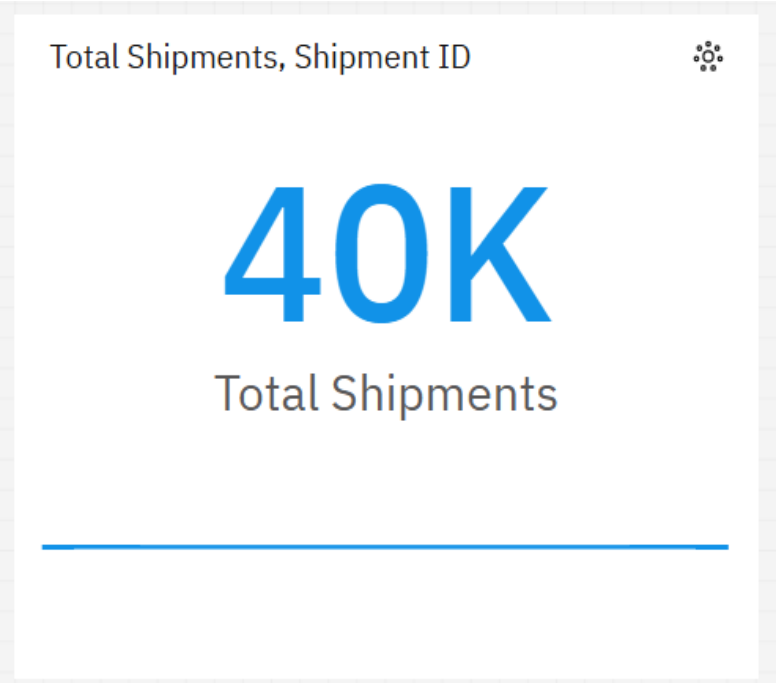
Qn 5

[Dashboard] Design a SwiftRoute Fleet Operations Dashboard with: (1) KPI tiles — Total Shipments, On-Time Rate %, Breakdown Count, Total Fuel Cost, (2) A Bar chart for Shipments by Client, (3) A Line chart for Daily Delivery Volume Trend, (4) A Pie chart for Delivery Status Distribution, (5) A Driver Performance table by Rating. Add Route and Vehicle Type filters.

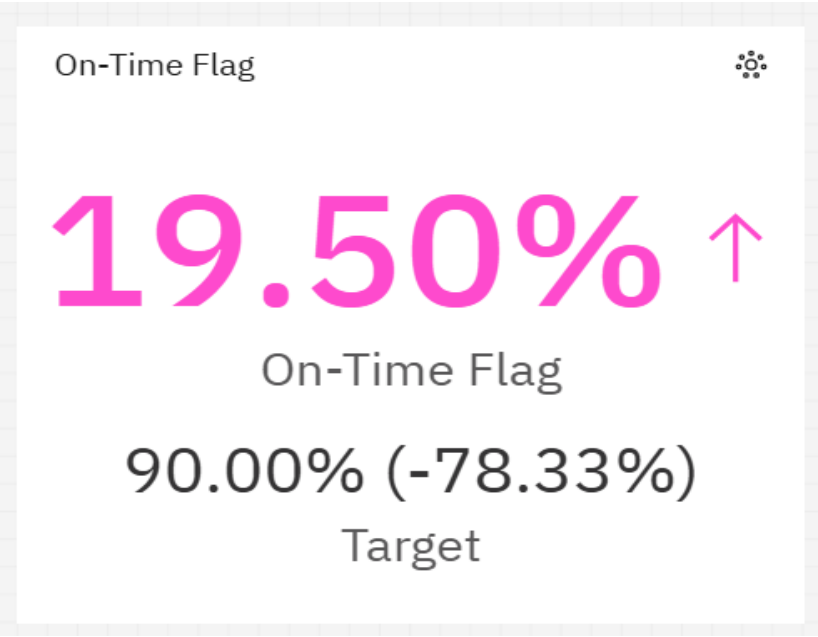
Dashboard Name: SwiftRoute Fleet Operations Performance Dashboard

A comprehensive real-time overview of fleet efficiency, tracking delivery success rates, mechanical reliability, and driver performance to optimize logistics costs and customer satisfaction.

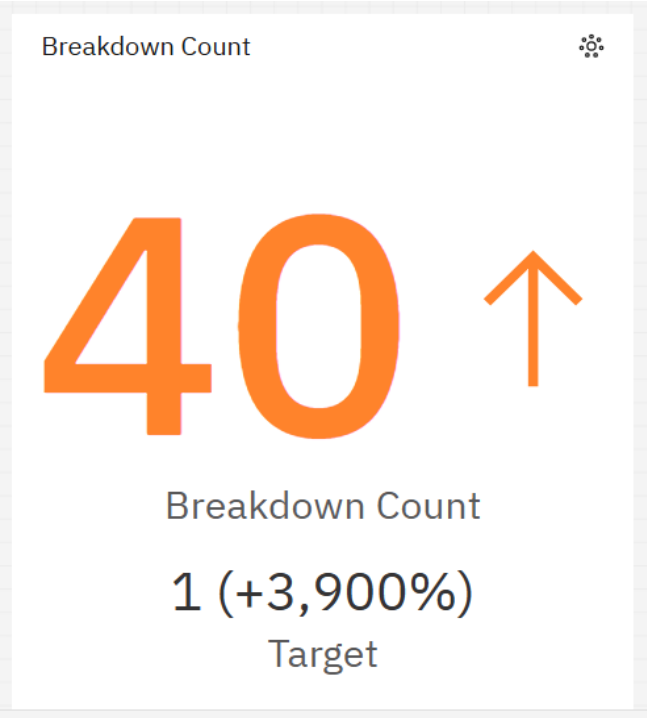
KPI Tile 1 — Total Shipments value displayed



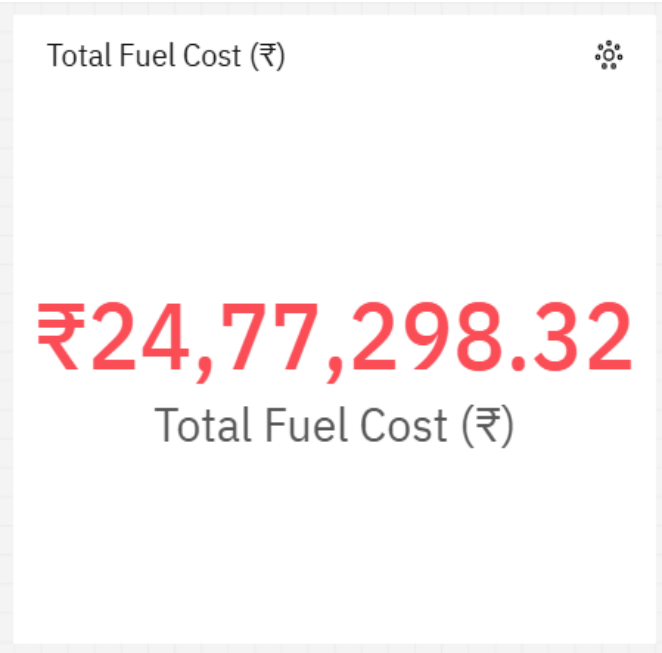
KPI Tile 2 — On-Time Rate % with target needle

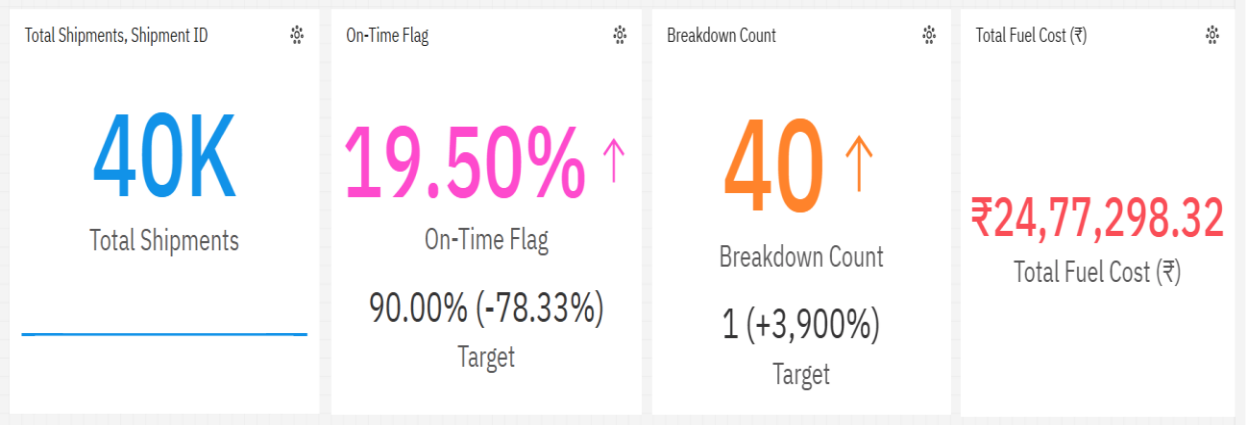


KPI Tile 3: Breakdown Count

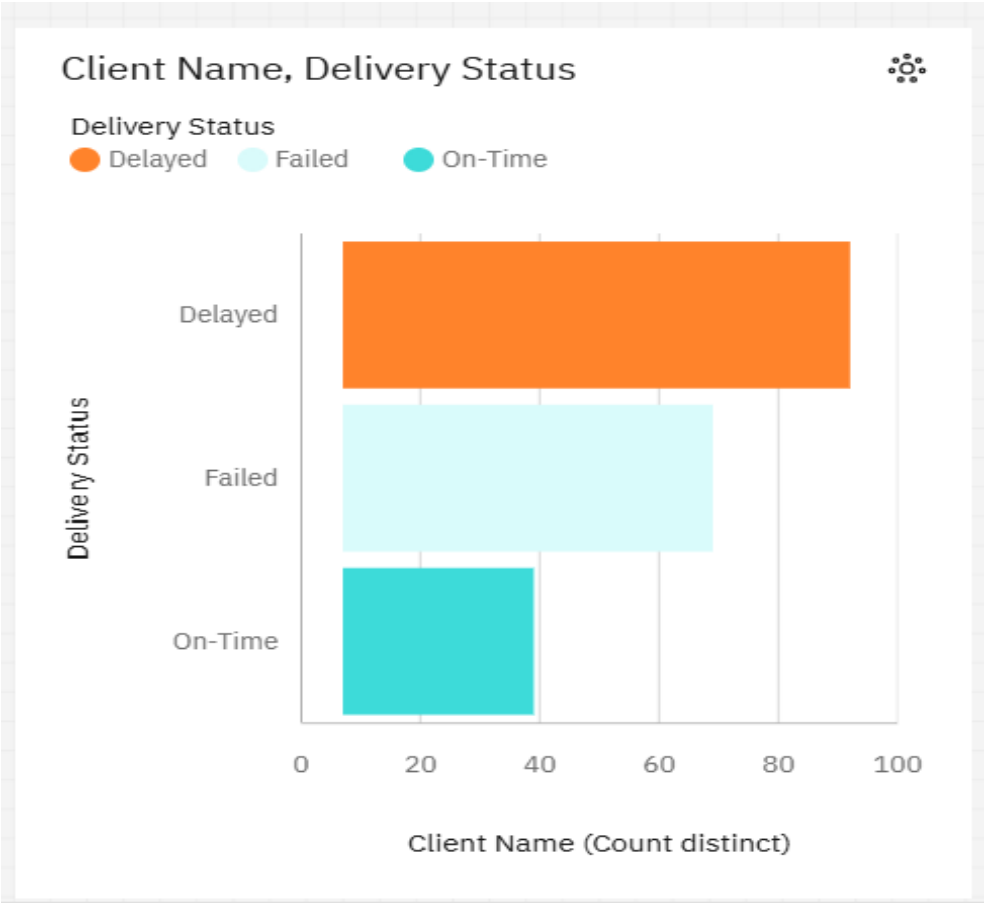


KPI Tile 4: Total Fuel Cost

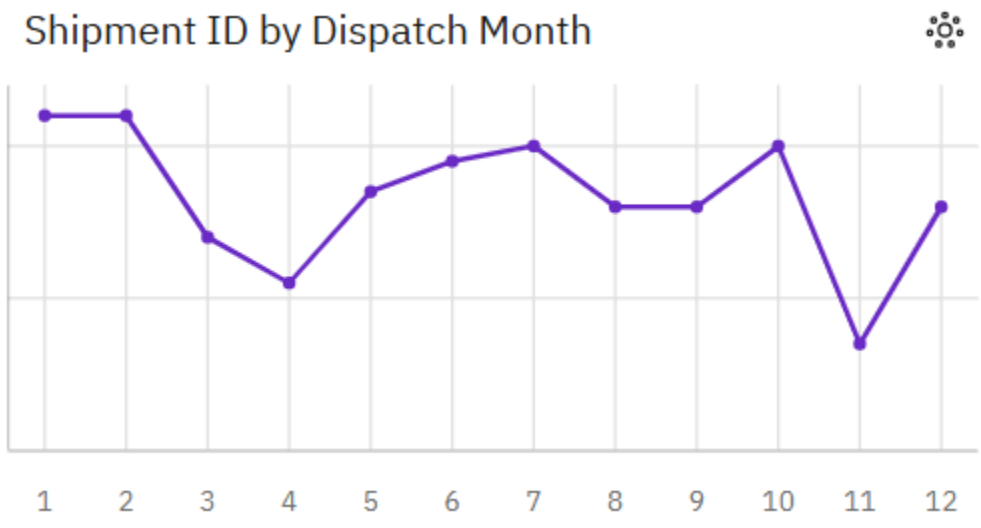




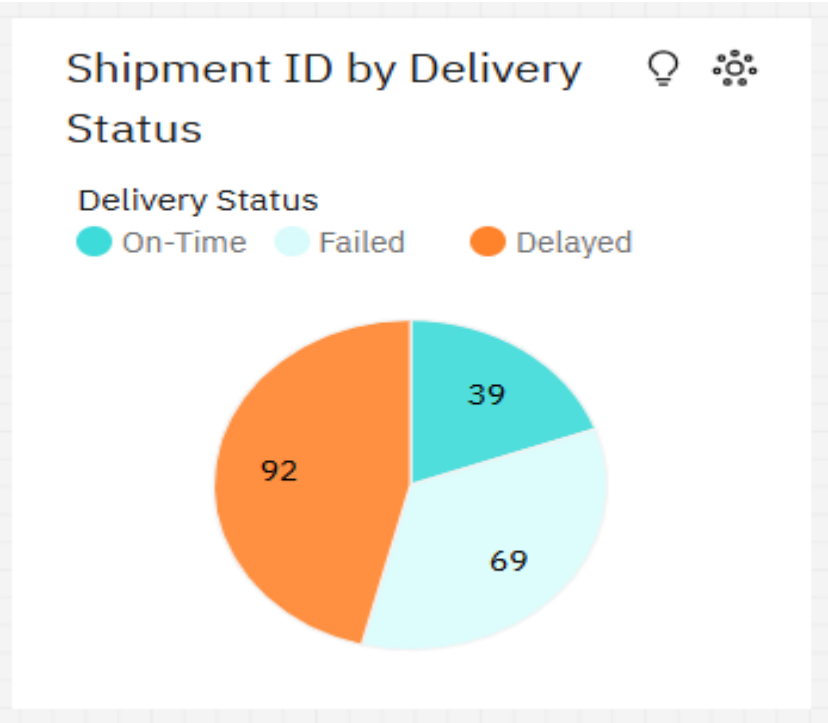
Bar Chart — Shipments by Client with stacked status colours



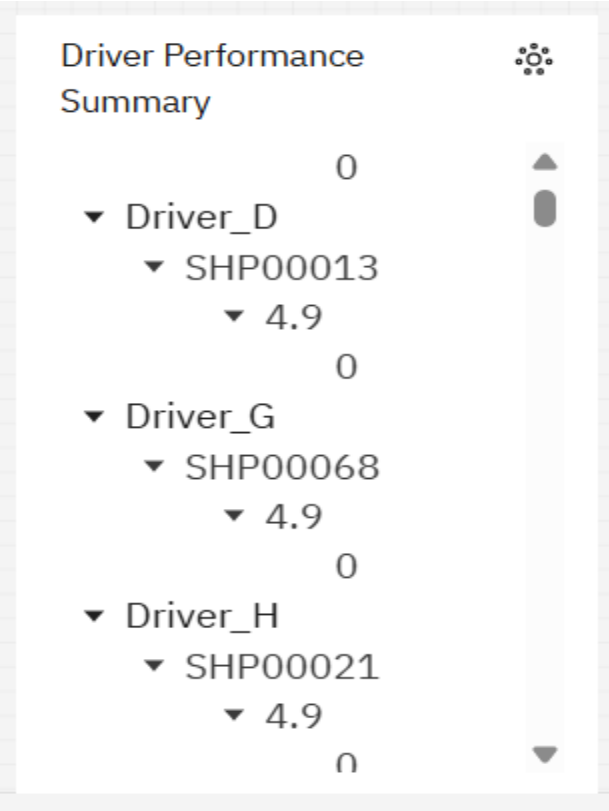
Line Chart — Monthly delivery volume over time



Pie Chart — On-Time / Delayed / Failed split



Driver Performance Table — ranked by customer rating



Filters panel — Route and Vehicle Type filters connected to all widgets

[Story Making] Create a Cognos Story for SwiftRoute's Monthly Fleet Review:

Scene 1 —

Operations Overview & Fleet Statistics,

Scene 2 — Client SLA Compliance Performance,

Scene 3 — Delivery Failure & Damage Analysis,

Scene 4 — Vehicle Breakdown Trends & Fleet Health,

Scene 5 — Driver Performance & Fuel Efficiency,

Scene 6 — Route Optimization & Cost Reduction Recommendations

Report Name

SwiftRoute Monthly Fleet Performance Review Story

An interactive Cognos Story that provides a **comprehensive monthly analysis of fleet operations**, covering delivery performance, SLA compliance, failures, vehicle health, driver efficiency, and cost optimization.
The story helps management **identify operational bottlenecks, improve SLA adherence, and reduce logistics costs** using data-driven insights.

:

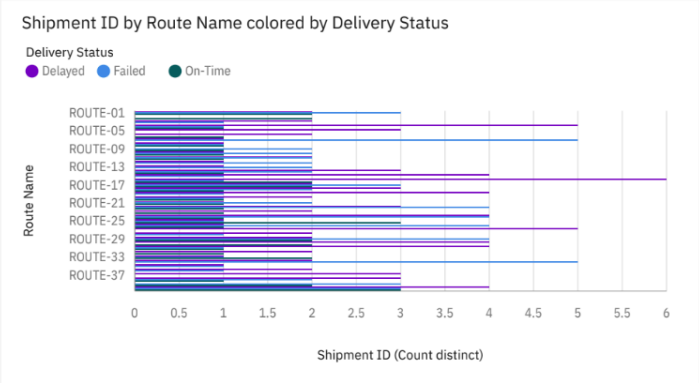
SwiftRoute Logistics – Fleet Overview

This report shows overall delivery performance across routes, vehicles, and drivers.

Monthly Delivery Performance Summary

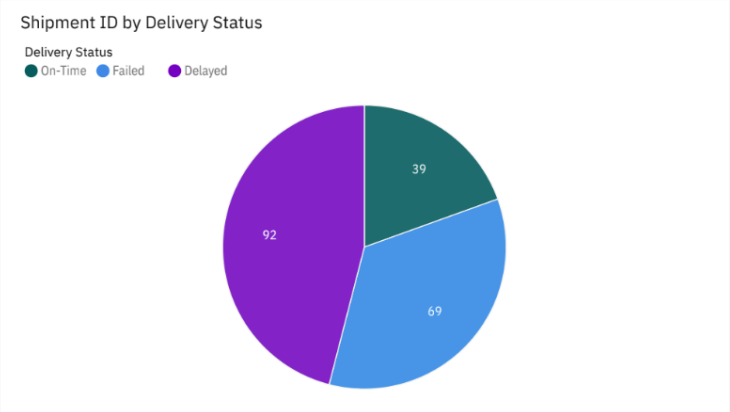
Route Performance Analysis

- *This chart shows delivery performance across different routes.*



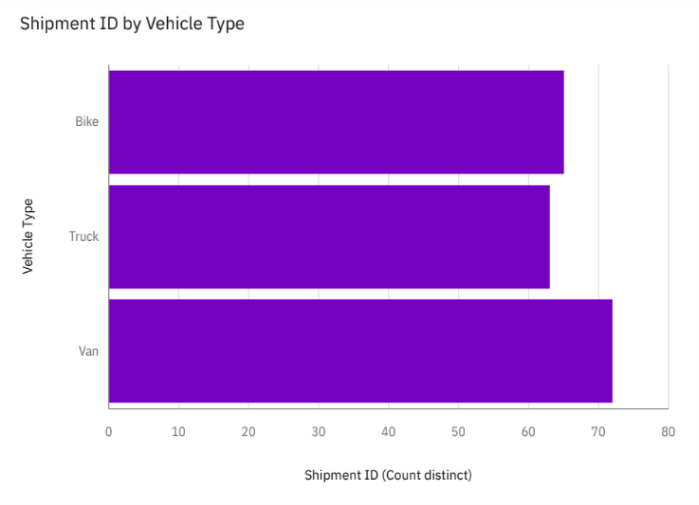
Delivery Status Analysis

- Failed and delayed deliveries impact customer satisfaction.



Vehicle Type Analysis

- Different vehicle types contribute differently to deliveries.



Driver Performance

- *Driver performance affects delivery success and customer satisfaction.*

Driver Name, Customer Rating (1-5) and Shipment ID

Driver Name	Customer Rating (1-5)	Shipment ID
Driver_A	1	SHP00099
	1.1	SHP00115
	1.1	SHP00191
	1.2	SHP00154
	1.9	SHP00171
	2.2	SHP00199
	2.3	SHP00057
	2.3	SHP00086
	2.4	SHP00123
	2.5	SHP00135
	2.5	SHP00176

Recommendations

- 🔴 Immediate Action:
- Fix vehicles with high breakdown

🟡 Short Term:

Improve driver training

🟢 Long Term:

Optimize routes for efficiency

📦 Client Focus:

Reduce delivery failures
